

## 242. Valid Anagram

Easy    5063    219    Add to List    Share

---

Given two strings `s` and `t`, return `true` if `t` is an anagram of `s`, and `false` otherwise.

An **Anagram** is a word or phrase formed by rearranging the letters of a different word or phrase, typically using all the original letters exactly once.

### Example 1:

```
Input: s = "anagram", t = "nagaram"
Output: true
```

### Example 2:

```
Input: s = "rat", t = "car"
Output: false
```

### Constraints:

- `1 <= s.length, t.length <= 5 * 104`
- `s` and `t` consist of lowercase English letters.
